GRAPHIC SOLUTIONS

## parking facilities

Parking facilities are often the most visible parts of an institutional or corporate campus. Wayfinding and identity systems should be efficient and impactful. Bluebird has extensive knowledge in all facets of parking infrastructure for universities, transit centers, biotechnology facilities and hospitals.

## our capabilities include

### Facilities Planning

Our years of experience managing parking projects enables us to expertly inform any signage or streetscape projects being considered.

### Documentation and Value Engineering

After receiving client specifications and before completing full construction documentation, we value engineer every project to ensure the highest quality and durability. This includes incorporating standard and custom modular systems for more efficient large scale production.

### Identity and Wayfinding in Multiple Materials

Parking infrastructure supports larger facilities. We can support a variety of materials and coatings to complement a campus or building architectural palette.

### Large Format Printing

With our large format printers we can create specialty graphics, glass and wall coverings for any environment.

### Metal Fabrication

Our craftspeople produce a range of signs, architectural elements and lighting fixtures.

### Digital, Lighting and Dynamic Integration

We are also expert in incorporating specialty dynamic lighting and digital screens.

### Installation

Our installation teams can manage implementation wherever our clients need us to be.

### << Project Hayden Research Campus

We worked with design firm OMLOOP to plan, fabricate and install signs for the parking facility at the Hayden Research Campus.
